## **DETAILED ACTION**

### ***Priority***

1. Applicants' claim to priority is acknowledged.

### ***Claim Objections***

2. Claims 5-7 are objected to because of the following informalities: the ending parentheses after Ti in each of these claims is unnecessary because there are no opening parentheses. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujiwara et al. (US Patent 6,242,134).

Fujiwara et al. teach the formation of a lithium-containing complex oxide by first forming a precipitate with nickel oxide in solution with another metal from the group Co, Mn, Cr, Fe and Mg, then adding lithium hydroxide or its hydrate and firing the mixture

(abstract). Fujiwara et al. also teach that the nickel and other metal can be carbonates (column 2 lines 59-65).

As for claim 4, Fujiwara et al. teach that the mole ratio of nickel to the metal selected from the group consisting of Co, Mn, Cr, Fe and Mg should be 95:5 to 70:30.
